PilotMall.com, Inc Releases Android Version of Popular Flight Planning App

St. Petersburg, FL – November 21, 2011 – PilotMall.com, Inc., providers of the popular iTunes app, the Flight Computer, announce today's release of the Flight Computer Application for Android. In response to the success of the iPhone app, releasing an Android version allows more aviators and aviation enthusiasts to benefit from the application's user-friendly flight planning features. Convenience and simplicity are the hallmark of the Flight Computer app.

Using the Flight Computer saves hours of calculations, giving pilots the ability to quickly access the numbers needed to more efficiently plan their flight. Starting with four simple buttons, pilots can choose to covert measurements between Nautical, Metric or Statute, set a timer, access the calculator or supplement instrumentation via the "Flight Computer Functions" button. Measurement conversions include speed, weight, length and more.

Through this proprietary application, pilots have the option to use the features for preflight or in-air computations. Determine needed data regarding altitude, ground or air speed, heading, planned or actual legs, fuel burn, endurance or weight and balance, all with a just a few taps of the finger. Just input known planning variables and let the application do the rest. A change in wind speed, wind direction or heading can quickly be recalculated with just a finger swipe.

Neil Glazer, President of PilotMall.com, Inc, explains the purpose of developing the Flight Computer application. "We designed this application because we wanted to fill a void in the marketplace." Regarding his thoughts on the app, Glazer says, "We feel this product should be an integral part of any pilot's flight planning."

The Flight Computer for Android, which is offered for a limited time at \$1.99, is available from the Android Market
